ONE-PIECE

Single-sided hollow rivet – tubular rivet

The tubular rivet (also single-sided hollow rivet) consists of a head and a tubular shank, which are formed separately and then joined using special machines. It is made from steel, brass and stainless steel strip and is available in various electroplated finishes.

How to read the dimensions

1. **T – Head diameter**
   Diameter of the visible rivet head.
2. **H – Shank height**
   Length of the shank below the head – choose it to suit the material thickness.
3. **P – Shank diameter**
   Outer diameter of the shank – corresponds to the required hole diameter.

DOUBLE-CAP RIVETS · TWO-PART

Double-cap rivets – upper part and lower part

The double-cap rivet consists of two parts: the upper part (head, female) and the lower part (shank, male). It is made of steel or brass and is available in various electroplated finishes – also nickel-free, lacquered, sublimated or finished with laser and diamond cut.

Versions and special features

- **Head shapes:**
  standard, cone point, truncated cone, hemisphere and square pyramid
- **Lower parts:**
  in various shank heights, open or closed with cap
- **Clamp in the shank:**
  the head can be positioned by hand before closing
